

Coquitlam Zoom Teeth Whitening

In less than 2 hours of treatment you'll be pleasantly amazed with the outcomes of ZOOM In-Office! By means of a blend of photosensitive bleaching gels and specially created ultraviolet lamps, ZOOM In-Office! whitening works to skillfully whiten your teeth. Staining caused over several years can easily be eliminated with this treatment. Certain practices that induce yellowing such as drinking coffee, tea, red wine, and also smoking and chewing tobacco, as well as consuming specific pasta sauces and curries are no match for ZOOM bleaching. Furthermore, this treatment choice has been proven safe and effective and persists for a significant amount of time. A brighter, whiter smile can enhance your self esteem and self image and create remarkable impressions on people.

Careful dental hygiene activities like routine flossing and twice daily polishing in addition to regular oral health cleanings, are suggested to help you in keeping your brand new smile as bright as possible. Outcomes will ultimately vary but as many as eight shades whiter could be achieved in just one appointment.

Customized dental whitening trays for home utilization are included in the take-home advanced whitening kit. Instructions for home use along with syringes and the whitening gel will also be added to the kit. The oral trays loaded with bleaching gel might be used between half an hour to four hours each day and night for nearly 2 weeks. The bleaching gel functions by seeping inside the tooth enamel pores and fosters a reaction that has the power to break and loosen the stains that have caused the discoloration. About an average of six shades whiter can be expected when utilizing this treatment technique over the span of seven-fourteen days of time.
