

Composite Fillings Coquitlam

A composite resin white restoration could be utilized for a variety of tooth problems including the repair of fissures, cracks and tooth caries. The damaged piece of the tooth must be entirely taken out prior to the placing of a composite restoration.

With many kinds of fillings offered for patients, each of them has certain weaknesses and strengths. Ask your dentist for further information in regards to your alternatives to determine which may offer the best option for you. Synthetic resin restorations and silver amalgam restorations are the most widely used dental restorations these days. Given that composite resin restorations are able to closely match the natural colour of your teeth, they are more typically used for use on the anterior teeth where the visible areas of the teeth are.

Synthetic resin fillings are not permanent and could need to be replaced at some time in the foreseeable future, they however, are fairly durable and may last for several years, giving you a long-lasting beautiful smile.

A few of the reasons that patients may require composite resin fillings are for chipped teeth, cracked or broken teeth, worn teeth, corroded teeth, and to seal the room between two teeth.
